Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/691,993

Applicant(s)

MULLIGAN ET AL.

Examiner

Todd Ingberg

Art Unit

2193

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 12 July 2007.
- 2a) ☒ This action is FINAL. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-45 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-3, 7-23 and 26-45 is/are rejected.
- 7) ☒ Claim(s) 4-6, 24-25 is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- ☒ Notice of References Cited (PTO-892)
- ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- ☐ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____
- ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- ☐ Notice of Informal Patent Application
- ☐ Other: _____

Art Unit: 2193

DETAILED ACTION

Claims 1 – 45 have been examined.

Claims 1,2,4,11,17,21,24,26,30,32,34,38,40,42 and 44 have been amended.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1 , 7 – 10, 21 – 23, 32 – 33 and 40 – 41 are rejected under 35 U.S.C. 103(a) as being unpatentable over Norris et al, filed December 28, 2000 in view of USPN # 6,807,641 B1, October 19, 2004 Ishiguro.

Claim 1

Norris anticipates a machine readable medium containing executable computer program instructions which when executed by a data processing system cause said system to perform a method to set up software installed on a storage device of the data processing system, the method comprising: automatically searching in a plurality of locations for configuration information (Norris, Abstract, search a preferred at an endpoint and having second or third party provider as option)

that includes one or more parameters to set up the software;

setting up the software installed on the storage device of the data processing system

for operation of the data processing system according to the one or more parameters

contained in the configuration

information found in at least one of the plurality of locations (Norris, Abstract, two endpoints to attempt to get a codec).

Norris teaches updating a CODEC and Ishiguro teaches the parameters associated with a CODEC. Therefore, it would have been obvious to one of ordinary skill in the art at the time of invention to combine Norris and Ishiguro, because parameter updates over a distributed system require less bandwidth and improve efficiency.

Note

Updating the codec has software updates.

Claim 7

Art Unit: 2193

The medium of claim 1, wherein the software is a portion of an operating system of the data processing system.

Examiner Interpretation

In view of the current limitations the limitation that the invention retrieves "a portion of an operating system" is given no patentable weight. No function is provided. The data could be any series of zeros and ones.

Claim 8

The medium of claim 1, further comprising: determining a plurality of identifications of the data processing system; wherein said searching uses the plurality of identifications to find configuration information suitable for the data processing system. As per claim 1 search more than one location for the codec.

Claim 9

The medium of claim 8, wherein the plurality of identifications comprise one of:

- a) a network address of the data processing system; (Norris, Internet web address to access codec as per claim 1)
- b) a hostname of the data processing system; c) a hardware serial number of the data processing system; and d) a hardware address of a network interface device of the data processing system.

Claim 10

The medium of claim 8, wherein the plurality of identifications comprise one identification that matches any data processing system. As per claim 9.

Claim 21

A method to set up software installed on a storage device of a data processing system, the method comprising: automatically searching in a plurality of locations for configuration information that includes one or more parameters to set up the software; and setting up the software installed on the storage device of the data processing system for operation of the data processing system according to the one or more parameters contained in the configuration information found in at least one of the plurality of locations

As per claim 1

Claim 22

The method of claim 21, wherein the software is a portion of an operating system of the data processing system. As per claim 7.

Claim 23

The method of claim 21, wherein the plurality of locations are periodically searched.
As per claim 1 – Periodically is from time to time.

Claim 32

A data processing system to set up software installed on a storage device of the data processing system, the data processing system comprising: means for automatically searching in a plurality

Art Unit: 2193

of locations for a configuration information that includes one or more parameters to set up the software; and means for setting up the software installed on the storage device of the data processing system for operation according to the one or more parameters contained in the configuration information found in at least one of the plurality of locations. As per claim 1.

Claim 33

The data processing system of claim 32, wherein the software is a portion of an operating system of the data processing system. As per claim 7.

Claim 40

A data processing system, comprising: memory including a storage device, the storage device having installed software; a processor coupled to the memory, the processor automatically searching in a plurality of locations for configuration information, the processor setting up the software installed on the storage device using first configuration information found in at least one of the plurality of locations. As per claim 1.

Claim 41

The data processing system of claim 40, wherein the software is a portion of an operating system of the data processing system. As per claim 7.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 2,3, 5, 11 – 20, 31, 34 – 39, 42 - 45 are rejected under 35 U.S.C. 103(a) as being unpatentable over Norris (as per above) in view of #6,807,558 B1 Hassett et al, Filed June 2, 1998.

Motivation to Combine

Norris teaches searching more than one location for software to install and Hassett teaches security features of data transportation. therefore, it would have been obvious to one of ordinary

Art Unit: 2193

skill in the art at the time of invention to combine Norris and Hasset because security measures makes computing environments more trustworthy.

Claim 2

The medium of claim 1, wherein the configuration information comprises: a decryption key; and encrypted configuration information decryptable with the decryption key. Hasset, col 30, lines 40 – 42, teaches encryption.

Claim 3

The medium of claim 2, wherein the decryption key and the encrypted configuration information are found in different locations of the plurality of locations. As per claim 2.

Claim 5

The medium of claim 4, wherein the plurality of locations further comprise one location in a removable medium locally attached to the data processing system. As per claim 1 – address to internet and map where to install.

Claim 11

A machine readable medium containing executable computer program instructions which when executed by a data processing system cause said system to perform a method to set up software for the data processing system, the method comprising: querying a directory server to obtain a configuration information that includes one or more parameters to set up the software; and setting up the software for operation of the data processing system using according to the one or more parameters contained in the configuration information obtained from the directory server. As per claim 1 and Hasset, Figure 4.

Claim 12

The medium of claim 11, wherein the software is a portion of an operating system of the data processing system. As per claim 9

Claim 13

The medium of claim 12, further comprising: automatically obtaining a network address and an address of the directory server from a server on a local area network; and configuring a network interface device of the data processing system to use the network address; wherein said querying uses the address of the directory server and the network interface device which is configured to use the network address. AS per claim 11.

Claim 14

The medium of claim 12, wherein the configuration information comprises one of:

- a) user account information; (Hasset, Figure 4)
- b) time zone information;
- c) keyboard information; and
- d) a default language.

Art Unit: 2193

Claim 15

The medium of claim 12, wherein the configuration information comprises information specifying whether one or more services of the operating system shall be provided on the data processing system. Hassett, Figure 20 Authentication – requires OS services.

Claim 16

The medium of claim 11, wherein the configuration information comprises a license key for the software. Norris, Abstract.

Claim 17

A machine readable medium containing executable computer program instructions which when executed by a data processing system cause said system to perform a method to set up software installed on the data processing system, the method comprising: automatically searching for encrypted configuration information that includes one or more parameters to set up the software; determining a decryption key to decrypt the encrypted configuration information; and setting up the software installed on the data processing system using the decryption key and the encrypted configuration information according to the one or more parameters contained in the encrypted configuration information. As per claims 1 and 2

Claim 18

The medium of claim 17, wherein the decryption key is communicated from a remote data processing system to the data processing system, and the decryption key is not stored on a file system of the data processing system. As per claim 3

Claim 19

The medium of claim 17, wherein said determining the decryption key comprises searching in a plurality of locations. As per claim 3

Claim 20

The medium of claim 19, wherein the plurality of locations comprise one of:

- a) a removable storage device locally attached to the data processing system;
- b) a predetermined location in a file volume in a file system of the data processing system; and
- c) a database on a remote data processing system accessible to the data processing system through a network connection. As per claim 6

Claim 26

A method to set up software for a data processing system, the method comprising: querying a directory server to obtain a configuration information that includes one or more parameters to set up the software; and setting up the software for operation of the data processing system according to the one or more parameters contained in the configuration information obtained from the directory server. As per claim 11.

Claim 27

Art Unit: 2193

The method of claim 26, wherein the software is a portion of an operating system of the data processing system. As per claim 7.

Claim 28

The method of claim 27, further comprising: automatically obtaining a network address and an address of the directory server from a server on a local area network; and configuring a network interface device of the data processing system to use the network address; wherein said querying uses the address of the directory server and the network interface device which is configured to use the network address. As per claim 8.

Claim 29

The method of claim 27, wherein the configuration information comprises information specifying whether one or more services of the operating system shall be provided on the data processing system. As per claim 15.

Claim 30

A method to set up software installed on a data processing system, the method comprising: automatically searching for encrypted configuration information that includes one or more parameters to set up the software; determining a decryption key to decrypt the encrypted configuration information; and setting up the software installed on the data processing system for operation using the decryption key and the encrypted configuration information according to the one or more parameters contained in the encrypted configuration information
As per claims 1 and 2.

Claim 31

The method of claim 30, wherein said determining the decryption key comprises searching in a plurality of locations. As per claim 3.

Claim 34

A data processing system to set up software, the data processing system comprising: means for querying a directory server to obtain configuration information that includes one or more parameters to set up the software; and means for setting up the software for operation of the data processing system according to the one or more parameters contained in the configuration information obtained from the directory server. As per claim 26.

Claim 35

The data processing system of claim 34, wherein the software is a portion of an operating system of the data processing system. As per claim 7.

Claim 36

The data processing system of claim 35, further comprising: means for automatically obtaining a network address and an address of the directory server from a server on a local area network; and means for configuring a network interface device of the data processing system to use the network address; wherein said means for querying uses the address of the directory server and

Art Unit: 2193

the network. interface device which is configured to use the network address. As per claim 13.

Claim 37

The data processing system of claim 35, wherein the configuration information comprises information specifying whether one or more services of the operating system shall be provided on the data processing system, and the one or more services comprise one of: a) email; b) printer; c) firewall; d) web; e) password; f) multimedia stream; and g) file sharing.

Norris, Internet – web, Abstract.

Claim 38

A data processing system to set up software, the data processing system comprising: means for automatically searching for an encrypted configuration information that includes one or more parameters to set up the software; means for determining a decryption key to decrypt the encrypted configuration information; and means for setting up the software installed on the data processing system using the decryption key and the encrypted configuration information according to the one or more parameters contained within the encrypted configuration information. As per claim 26.

Claim 39

The data processing system of claim 38, wherein the decryption key is communicated from a remote data processing system to the data processing system.

As per claim 2.

Claim 42

A data processing system, comprising: memory storing software; a network interface device; a processor coupled to the memory and the network interface device, the processor querying a directory server using the network interface to obtain configuration information, the processor setting up the software stored in the memory using the configuration information obtained from the directory server. As per claim 11.

Claim 43

The data processing system of claim 42, wherein the software is a portion of an operating system of the data processing system. As per claim 7.

Claim 44

A data processing system, comprising: memory storing software; a processor coupled to the memory, the processor automatically searching for encrypted configuration information, the processor determining a decryption key to decrypt the encrypted configuration information, the processor setting up the software installed on the memory using the decryption key and the encrypted configuration information. As per claim 26

Claim 45

The data processing system of claim 44, wherein the processor searches in a plurality of locations to determine the decryption key, and the plurality of locations comprise one of:

Art Unit: 2193

- a) a removable storage device locally attached to the data processing system;
- b) a predetermined location in a file volume in a file system of the data processing system; and
- c) a database on a remote data processing system accessible to the data processing system through a network connection. As per claim 3.

Allowable Subject Matter

5. Claims 4 – 6, 24 – 25 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

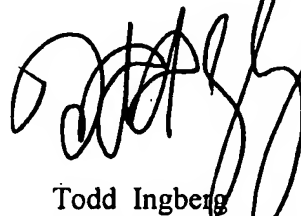

Art Unit: 2193

Correspondence Information

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Todd Ingberg whose telephone number is (571) 272-3723. The examiner can normally be reached on during the work week..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Meng-Ai An can be reached on (571) 272-3756. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
